## Schedule and Pricing

The Chinese Medicine Scheme combines two Medicine focused program rounds with the Check Sample program. Select the combination that best suits your needs. Participating in two rounds ensures laboratories have the opportunity to undertake timely verification of corrective actions, conduct more frequent staff training exercises, and monitor trends as required by ISO 17025. All samples represent "real" preparations, and are to be tested as received.

Check sample programs run for twelve months and are designed to provide essential, timely information concerning your testing performance. At the conclusion of each monthly check sample round, a summary report will be issued within ten business days of the result due date. Participants in the Check Sample Program have the opportunity to compare results with over 80 laboratories world wide.

Chinese Medicine Scheme			
Program Name	Herbal Preparation	Herbal Preparation	Check Sample
